

Foss Forest Design Plan

Map 4: Analysis Map (2 of 2)

Scale: 1:25,000

Date: December 2013

- Foss_Boundary
- Road Segments
- Blocks

The eastern section has good access for harvesting, but this diminishes in the western sections due to wet ground. Moderate levels of public use with local interest in developing further routes.

Aquaduct

Areas of good quality DF/SS in western part of forest.

Good areas of riparian woodland and Scots Pine with associate flora.

Shading of public road has improved through felling interventions.

Lassintulloch

Poor access to coupes located in south east of block.

Areas of limestone pavement through out forest block.

Difficult access for harvesting in some compartments. Areas of PAWS with potential for further expansion. Fenceline on south-west boundary requires replacement.

Poor access for harvesting southern coupes.

Harsh angular boundaries at odds with landscape.
